

DELHI PUBLIC SCHOOL NEWTOWN
SESSION 2022-23
MONDAY TEST

CLASS: IX
SUBJECT: CHEMISTRY

FULL MARKS: 40
DATE: 21.10.2022

General Instructions:

- The paper consists of three printed pages.
- Answers should be to the point.
- Question numbers should be copied carefully while answering the questions.
- Marks will be deducted for spelling errors.

Question: 1

Select the correct option:

[5]

- i) The basic radical in ammonium bisulphate:
- A) sulphate
 - B) bisulphate
 - C) ammonia
 - D) ammonium
- ii) The number of carbon atoms on a hydrogen carbonate radical is:
- A) 1
 - B) 2
 - C) 3
 - D) 4
- iii) Which of the following is the correct electronic configuration of potassium?
- A) 2, 8, 9
 - B) 8, 2, 9
 - C) 2, 8, 8, 1
 - D) 1, 2, 8, 8, 8
- iv) When a metal becomes an ion:
- A) it loses electron and is reduced
 - B) it loses electrons and is oxidised
 - C) it gains electron and is reduced
 - D) it gains electrons and is oxidised
- v) The atomic number of an element placed in period 3 and group 13 is:
- A) 11
 - B) 12
 - C) 13
 - D) 14

Question: 2

Write balanced chemical equations for the following word reactions: [5]

- Ammonium hydroxide added to ferric sulphate solution gives ferric hydroxide and ammonium sulphate.
- Heated aluminium is reacted with nitrogen gas to produce aluminium nitride.
- Addition of sodium hydroxide to lead monoxide forms sodium plumbite and water.
- Decomposition of potassium nitrate on heating gives potassium nitrite and oxygen.
- Passage of ammonia into an atmosphere of oxygen in presence of platinum catalyst gives nitric oxide and water.

Question: 3

Name the following: [5]

- A metalloid in period 3.
- A non polar covalent molecule with four single covalent bonds
- A molecule which contains a double covalent bond.
- The type of bonding present in magnesium fluoride
- The name assigned to group 18 elements.

Question: 4

Elements P, Q, R, S and T have atomic numbers 8, 9, 11, 12 and 18 respectively.

State which one is: [5]

- A divalent non-metal
- An inert gas
- A member of the halogen family
- Belongs to Period 3 and Group 1
- A member of alkaline earth metal family

Question: 5

- Calculate the following:[N=14, C=12, H=1, Na=23, O=16] [5]
 - Percentage of nitrogen in NH_2CONH_2
 - Relative molecular mass of sodium acetate.
- Give reasons for the following statements:
 - Dobereiner's method of classification of elements did not hold much weightage for future classification.
 - Group 1[IA] elements are called alkali metals.

Question: 6

An element P has 2 electrons in its M shell, it forms bond with an element Q which has 7 electrons in its third orbit. [5]

- Write the formula of the compound formed.
- Which nearest electronic configuration will element P and Q acquire?
- Show by electron dot and cross diagram the formation of compound between P and Q.
- Name the type of compound formed above.

Question: 7

An element X with atomic number 7 combines with hydrogen to form a molecule XH_3 . [5]

- Draw the orbit diagram to show the formation of the above compound.
- Name the type of compound formed above and define it.
- Write the formula of the compound formed between magnesium and X.
- Locate the position (both group and period) of X in the periodic table.

Question: 8

Answer the following questions:

[5]

- a. The formula of magnesium oxide is MgO . State the formula of barium chromate and barium sulphate, if barium belongs to the same group as magnesium.
- b. Give the name of the elements which occupy the following positions in the Periodic Table.
 - i. Period 4, group II A
 - ii. Period 2, group III A
 - iii. Period 3, group zero
